## CIRCULAR II

### To whom it may concern

Dear shareholder

1. The initial conference call with the management of the alternative securities exchange (as referred to in a previous circular) went well.

They will provide the required documents and arrange a full presentation in Cape Town late in January 2020.

The relationship is important because it may lead to an additional listing of Equator Mineral Holdings.

2. In addition Cryptique and Megatron had an extensive meeting on the digital framework and the supporting technology.

The latter is almost complete and will go live after limited further investment.

3. The initial framework for the envisaged starter kit (specifically designed for application in Angola/the DRC) can be generalized into a massive international wellness loyalty programme.

The full technical support base is ready, subject to specific adaptations and finalizing of the marketing documentation.

This could provide torrents of cash flow within a few years.

4. The smart space concept (based on president Ramaphosa's smart city idea) can similarly be placed on the market as a major strategy to alleviate the over-construction of malls, stadiums and similar under-utilized buildings or centres worldwide.

The supporting technology is ready and the relevant implementation strategy being drafted.

This will make Megaton/Cryptique a major player in the property sector.

5. The above goes hand-in-hand with the strides made in the latest wi-fi technology where Megaton, with its in-house developed routers is setting the pace.

It is expected that this radio wave system will completely replace cables and optic fibre in the next decade.

6. All these products and activities underscore the viability of an additional listing of Cryptique/Megaton on the Nasdaq exchange in New York (and even in Amsterdam).

All shareholders should be substantially advantaged. A listing price of \$1.00 per share is not far fetched.

Regards

Wilhelm Smith
